

Eyelash Extensions Aftercare

To maintain your eyelash extensions, the following instructions should be followed:

- No** use of waterproof mascara – If you use mascara it must be water soluble
- No** use of oil based products around the eye area
- No** water or oil to come in contact with the eye area within 24 hours of the eyelash extension procedure
- No** sauna or hot tub for 48 hours after the eyelash extension procedure
- No** use of eyelash curlers
- No** tinting or perming of the natural lashes while wearing eyelash extensions
- No** continuous tugging, rubbing or pulling on the eyelash extensions
- Use caution** when blow-drying hair (extensive heat on lashes could distort the shape of the extensions)
- Where possible** use Coating Sealant two times a week to extend the life of your lashes
- It is normal** for the client to experience the loss of a few lashes during the first 24hrs after the application
- Be gentle** with the lash extensions, avoid tugging and getting them caught on clothes and towels
- Never** pull off the eyelash extensions as this will pull out your natural eyelashes
- Gently** comb through the lashes each morning to maintain a good appearance
- Schedule your appointment** within 2-3 weeks of your initial eyelash extension procedure for infill

If an allergic reaction is suspected such as swelling, redness or puffiness, in the first case contact your therapist. In severe cases seek medical advice. Eyelash adhesives generally contain 2-ethoxyethyl 2-cyanoacrylate
